

Barony of Terra Pomaria Circlet Modifications Proposal

Description of options for repairs

I have learned a lot since first making these years ago. I look at all the proposed solutions here as viable solutions for the detachment of the liners as they do now. The last two options will be the best for the long term preservation of the liners and presence of the Baronial coronets. They will also be an option to keep the circlets in good repair if I ever can't do maintenance in the future. Others could follow the pattern of the existing liners to remake and reattach them with the same or similar results.

YIS, Master Sigmund Helmschmied O.L. mka Vrin Thomas

OPTION 1: Re-glue and re-attach the existing leather in exactly the same way as it is now. The durability of this fix is about 2 years to 18 months depending on how often they are used in warm weather and on warm heads. **Pros: cheapest solution Cons: will not last and will eventually wreck the leather liner permanently as the glue fails and stresses the leather.**

Cost \$50

option 1 (as it is)

OPTION 2: Reattach liner using a stitched in place method. I will drill a series of small 1/16” holes into the circlet edges to sew through. The leather liner can be replaced this way by others in the future when I may no longer be able to. **Pros: long term attachment, can be done by others** **Cons: requires drilling into the circlets, a cosmetic change to the circlets.**

Cost\$: 300

option 2

Option 3: Build a new lining attachment band onto the existing crowns. This is the reattachment of a new band to the circlet to sew the liner to. This is a seamless attachment (we will not see any stitches to the circlets) **PROS: Long term attachment, can be repaired and replaced by others. It adds to the baronial circlets as they look now. Possibly best looking?** **CONS: most expensive, most difficult to build**

Cost: \$600

option 3
